

Educational Lab Equipments

Description

Blood type, an inherited characteristic, is valuable to know in that it affects medical procedures, such as surgery and transfusions or paternity testing, as well as serving as evidence in criminal investigations.

Blood typing is a method of classifying blood based on the presence or absence of specific proteins, called erythrocytes, on the surface of red blood cells.

Determining blood type can help provide supporting evidence or eliminate a possible suspect's involvement in a crime.

This activity includes a Teacher's Manual and Student Guide and Analysis copy-masters. There is enough material for 15 groups.

Note: This activity uses Innovating Science Simulated Blood and is safe for classroom use.
