

Product Code . JLI-BLE-10698

Turning Genes On and Off Lab Investigation

Description

Investigations allow students to design their own experiments to identify other variables which may affect gene expression. Explore how genes respond to their environment Use a safe, commonly found microbe to investigate and predict the effect of temperature on gene regulation and expression. Expression of this particular gene is easily recognized by the production of a pigment which turns the bacteria colonies red for a striking visual demonstration of gene manipulation.
